

LIGHT FRAMES

VOLUNTEER + PARTICIPATE

LIGHT FRAMES is an experimental installation by Professor Gail Peter Borden at the prestigious Materials & Applications Gallery in Silver Lake. There are two large elements: a variably triangulated conduit tower and a pneumatic PVC chapel. Each will be installed on a separate weekend. Bring your friends for an informative and fun event. We will be working all day on Saturday and Sunday of both weekends. Please volunteer for one or both. Please consider participating for a day and RSVP. For more information on the project or to volunteer to help with its final assembly email: gpborden@gmail.com or call **919.455.1053**.
